

Meadow in Progress

We want our community to be a place where nature can thrive. So this area is being naturally restored as a wildflower meadow to help pollinators like bees.

This will take time. By mowing less, we are giving native wildflowers a chance to grow - the best source of nectar and pollen for our local bees.

During the year, it will look like the pictures below: buzzing with life, brilliant for biodiversity, and a haven for pollinators and other wildlife.
